

The greatest waste of water

is watering too much, too often.

Sign up for the Weekly Watering Number and we'll take the guesswork out of deciding how much water your landscape needs.

The Weekly Watering Number is the amount of water in inches that your lawn and other plants will need each week from April through September.

SIGN UP TODAY

Visit www.regionalh2o.org/weekly-watering-number to sign up for your zip code-specific watering number and you'll also receive seasonal tips to help you use water efficiently outdoors.

Everyone can have a blue thumb!

Water use is highest during summer months due to outdoor watering.

Here are simple things that you can do to reduce your outdoor water use and save a few bucks:

- 1 Regularly check your watering system to make sure it is working correctly. Finding and fixing a dripping faucet or broken sprinkler head could save thousands of gallons of water over the summer.
- 2 Make sure you are watering your lawn and garden, and not the street or sidewalk.
- 3 Use a watering gauge or any flat-bottomed container (like a tuna can) to see how long it takes your sprinkler to water an inch. Search the term “gauge” on www.regionalh2o.org for information on how to do this.

**Do your part to use water wisely.
It's just the right thing to do.**

The Regional Water Providers Consortium provides leadership in the planning, management, stewardship, and resiliency of drinking water in the Portland, OR metropolitan region.
