

WHAT DO YOU KNOW ABOUT H_2O ?

ACTIVITY BOOK

BE WATER SMART

Water is the most valuable natural resource on earth. We can't live without it. Which means we need to use it wisely and learn as much about it as possible. This book of puzzles and games will test how much you know about H₂O. Open your mind and let the info flow. Get water wise!

BELLOW THE SURFACE

You can't survive without water. Do you know where to find it? Hope so, because this test could make you thirsty. Draw a line to link each question with the correct answer.

Give an example of standing surface water.

About how many inches of snow make up an inch of water?

What type of soil is most likely to allow groundwater contamination?

What are smaller streams that flow into larger streams called?

Of all the earth's water, how much of it is found in the oceans?

Water that runs off hard surfaces is called?

What is a geographical area called where all the water drains naturally to one place?

What is the scientific name for the study of groundwater?

What is the name of an artificial lake that stores water?

What is the name for an underground layer of sand, gravel, or other rock that is a source of groundwater to a well or spring?

Tributaries

Aquifer

Watershed

97%

Reservoir

10 inches

Surface run-off

Hydrogeology or geohydrology

Sandy

Lake, ponds, swamps, bogs, marshes

A cartoon illustration of a blue wave crashing over a sign that says "AND". The wave is depicted with white highlights to show its motion. Two water droplets are shown falling from the wave. The background is a solid light green color.

4	
5	

Add a shut-off nozzle to your garden hose and save about 5-7 gallons of water each minute that your hose is on.

WHAT'S YOUR H₂O IQ?

ARE YOU A WATER SAVER? We don't mean the lifeguard kind, we're talking about people who use only the water they need and leave the rest for the fish and Mother Nature (she gets thirsty, too). Answer the following questions and see how you "measure up" as a water saver.

WHEN I BRUSH MY TEETH I...

- a. Only turn the water on to wet my brush and rinse.
- b. Leave the water running the whole time.
- c. I never brush my teeth; I prefer "Pearly Browns."

I USE THE TOILET FOR...

- a. The stuff you can't do unless you unzip.
- b. Shooting baskets with tissue.
- c. My dog's water dish; he loves the extra flavor.

FOR ME, THE SHOWER IS...

- a. A quick dip; I have better things to do than wrinkle.
- b. Where I can take time to improve my yodeling skills.
- c. What? Shower and lose my signature scent?

WHEN MY PARENT ASKS ME TO DO THE LAUNDRY I...

- a. Make sure there's a full load, before starting the washer.
- b. Know the fewer things I wash, the fewer I'll have to fold.
- c. Fold the stuff in the hamper and spray it with Lysol™ – so far they haven't noticed.

DURING THE DAY I QUENCH MY THIRST WITH...

- a. Water that was chilled in the refrigerator.
- b. Cold water I got by letting the tap run until cool.
- c. A super-big, super-sugary, and super-cafeinated super-sipper!

WHEN I CAN'T FINISH A GLASS OF WATER I...

- a. Use it to water the plants.
- b. Dump it down the drain.
- c. Put my grandpa's teeth back where I found them; it was the only glass I could find!

IF YOU ANSWERED...

MOSTLY "a's":

You're a Water Super Saver! You know water is vital for life, but you don't waste it either.

MOSTLY "b's":

Remember – there's a limited amount of water available for use and you may be using more than your share. See if you can modify a habit or two and turn your "b's into "a's".

MOSTLY "c's":

You may be saving water, but you're lacking serious personal hygiene. It's okay to USE water, just use it wisely!

CONSERVA-Quiz

Water is a vital resource and conserving it is smart. Your brain is also a valuable resource. Use it to connect each question with the right answer.

Conserving water is important because it

- a) saves money
- b) helps salmon
- c) we won't have to build more reservoirs
- d) all of the above

How can you save water while brushing your teeth?

Which of the following is the best example of water waste?

- a) washing the driveway
- b) bathing
- c) drinking
- d) fires

How much water does the average family of four use each day?

- a) 400 gallons
- b) 120 gallons
- c) 500 gallons
- d) 50 gallons

True or False: A faucet that is dripping 60 drops a minute will waste about 8 gallons a day or 240 gallons in a month.

True or False: You can use your water meter to check for leaks.

True

400 gallons

a) washing the driveway

Turn the water off

True

d) all of the above

KNOW YOUR H₂O

Cover the true/false answers on the right side of this page. Circle T for True and F for False on the left side. Check your answers and see how water smart you are.

T OR F AS AIR RISES AND COOLS, THE WATER VAPOR IN IT WILL CONDENSE.

T The tiny drops of water move closer to each other to form clouds. It takes billions of drops to make a cloud!

T OR F WHEN THE SUN DRIES UP WATER IN LAKES AND STREAMS, IT COMPLETELY DISAPPEARS.

F The sun causes water to evaporate and become water vapor: like when steam rises from boiling water. The water vapor is still there; you just can't see it.

T OR F MOST OF THE EARTH'S FRESH WATER LIES UNDERGROUND.

T Most of our fresh water is found in between cracks in rocks and in soil.

T OR F SNOW ISN'T CONSIDERED PRECIPITATION.

F Both rain and snow are ways water returns to the Earth's surface, which is called precipitation.

T OR F A PERSON NEEDS A LITTLE MORE THAN A 1/2 GALLON OF WATER PER DAY TO LIVE.

T Yes! 75% of the body is made of water, so fill it up!

T OR F WE EACH USE ABOUT 100 GALLONS OF WATER A DAY.

T From brushing our teeth to taking a bath, we each use about 100 gallons of water a day.

T OR F THE WATER YOU DRINK HAS BEEN AROUND FOR MILLIONS OF YEARS.

T We have the same amount of water today as we did back when dinosaurs roamed the earth and seas. It's the same molecules, they have just been moved around!

T OR F OF ALL THE WATER IN THE WORLD, 50% CAN BE USED FOR DRINKING.

F Less than one percent of the Earth's water is fresh and can be used for drinking.

WATER, WATER,

**EVERYWHERE AND NOT
A DROP TO WASTE!**

**USE THESE FACTS TO HELP DR. DROP FIGURE
OUT HOW MUCH WATER SHE CAN SAVE
WHEN SHE GETS READY IN THE MORNING.**

WATER USE FACTS AND FIGURES

	STANDARD	WATERSENSE
Flush a toilet:	1.60 gallons	1.28 gallons
Run a bathroom faucet:	2.2 gallons/minute	1.5 gallons/minute
Take a shower:	2.5 gallons/minute	2.0 gallons/minute

6:32 AM In the bathroom, Dr. Drop turns on a standard faucet to brush her teeth.

How much water would she use if she leaves the water running two minutes? _____

How much water would she use if she turns the water on for 15 seconds to wet her toothbrush and again for 45 seconds? _____

How much water would she use if she used a WaterSense faucet and turned on the water for 15 seconds and again for 45 seconds? _____

How much less water is this than if she ran the standard faucet for two minutes?

6:35 AM Dr. Drop blows her nose.

How much water would she use if she puts the tissue in the garbage can? _____

How much water would she use if she flushes the tissue down a standard toilet? _____

6:40 AM Dr. Drop gets in the shower.

How much water would she use if she showers until 7:00 a.m.? _____

How much water would she use if she takes a short, five-minute shower with a standard showerhead?

TIPS FOR TAPS

brushing
faucets
leaks
shut-off
broom
five
mulch
sprinklers
drip
food coloring
refrigerator
teeth
driveway
full
shorter
toilet
evaporation
hose
sidewalk
trash can

Fill in the blanks below with the words on the left and discover what you can do to save water:

1. Water during the cool part of the day to avoid _____.
2. Instead of using a _____ to clean off your sidewalk or driveway, use a _____.
3. Take a _____ shower in _____ minutes or less.
4. Run the dishwasher and washing machine with _____ loads only.
5. When washing your car, use a hose with a _____ nozzle.
6. Put a layer of _____ around trees and plants to slow evaporation of moisture and discourage weed growth.
7. Position your _____ so water lands on the lawn or garden, not on your _____ or _____.
8. Check _____ and pipes for _____. Even the smallest _____ from a worn washer can waste 20 or more gallons a day.
9. Check your _____ for leaks by putting a little _____ in your toilet tank. If, without flushing, the color begins to appear in the bowl, you have a leak that should be repaired immediately.
10. Turn off the water while _____ your _____. Just wet your brush and fill a glass for mouth rinsing.
11. Don't use your toilet as a _____. Dead bugs and used facial tissue should go in the wastebasket.
12. Keep a bottle of cold water in the _____ for drinking, instead of letting the tap run until cold.

It's A MATCH

Draw a line from each word
to its definition.

Transmission System

A device used for recording the amount of water passing through a pipe

Distribution System

Water that is fit for consumption

Groundwater

A facility for cleaning and treating fresh water for drinking

Water Conservation

Using up goods and services

Precipitation

Large water pipes over 18" in diameter and pumps used to distribute drinking water from the source to the community

Consumption

Water underground, such as in wells and aquifers

Potable Water

The act of destroying harmful microorganisms

Treatment Plant

Pipes; valves to control water flow; and fire hydrants, tanks and reservoirs used in drinking water systems, which deliver water to homes

Water Meter

Saving, not wasting, water

Disinfection

Water vapor falling from the atmosphere as rain, hail, sleet or snow

Moving across the rows from left to right, use the remaining uncircled letters to fill in the blanks below and reveal the water conservation message.

WATER AMAZEMENT

Underground pipes carry water
all throughout your community.
Can you find the way water
flows from the storage tank to
the water fountain? Dive in.

STREAMS OF SCIENCE

Show what ya' know about H_2O . Draw a line that connects each question with the correct answer. Put your thinking cap on. It might rain.

Name the force that causes water to flow down hill.

When tiny drops of water gather together what do they make?

Which of the following is not part of the natural water cycle?

- a) evaporation
- b) condensation
- c) devaluation
- d) precipitation

As molecules of water freeze do they?

- a) expand
- b) contract
- c) neither a or b

What is water called that is located below the earth's surface in rock crevices?

Find the scientific name for the natural water cycle.

Water evaporating from the leaves of plants and trees is called?

What is the temperature at which water boils in Fahrenheit?

212 degrees

Transpiration

Gravity

Groundwater

A cloud

c) devaluation

a) expand or pull away from each other

Hydrologic cycle

CROSSWORD H₂O

Crossword puzzle courtesy of The Groundwater Foundation.

ACROSS

1. Layers of soil, sand and rocks that store groundwater.
5. To contaminate, to become unclean.
7. Water that is found underground in the cracks and spaces in the soil, sand and rocks.
9. Groundwater leaves the ground and enters a lake or stream in a _____ area.
10. An example of precipitation.
12. A pipe in the ground that is used to remove water from an aquifer.
13. Water on the earth's surface which moves into a lake or stream without absorbing into the soil.

DOWN

2. The largest use for groundwater is _____.
3. The stage of the water cycle when water changes from liquid to a vapor.
4. Clouds are an example of this.
6. A long period of dry weather could cause a _____.
8. Part of the water cycle when water soaks into the soil.
11. The movement of water underground is called groundwater _____.

WATER VOCABULARY

Aquifer - an underground layer of rock, soil and sediment that is filled or saturated with water

Condensation - water changing from a gas to a liquid

Conduit - a pipe for transporting fluids, such as water

Conservation - saving, not wasting

Consumption - using up goods or services

Contamination - unfit for use; pollution

Dam - a structure built to hold back a flow of water

Disinfection - the act of destroying harmful microorganisms

Distribution System - pipes, valves to control water flow; and fire hydrants, tanks and reservoirs used in drinking water systems

Drought - a long period of dry weather without rain

Evaporation - the changing of water from a liquid to a vapor and rising into the air

Groundwater - water underground, such as in wells and aquifers

Hydrant - an upright pipe with a spout or nozzle for drawing water from a water main, installed for fire suppression

Intake - an opening which allows water into a conduit

Irrigation - supply water to dry land by way of ditches, pipes or streams

Pipes - tubes that convey fluid such as water. Water pipe material can be plastic, copper, ductile or cast iron, or concrete cylinder

Potable Water - water that is fit for drinking

Precipitation - water vapor falling from the atmosphere as rain, hail, sleet or snow

Pump - a machine that assists the flow of water in pipes; used to boost water to a higher elevation

Reservoir - a tank, pond or lake where water is collected and stored until needed

Source - a body of water such as a spring or lake that creates a primary water supply

Surface water - precipitation that does not soak into the ground or return quickly to the atmosphere. Surface water can be a stream, lake, river, pond, wetland, ocean or reservoir

Transmission System - large water pipes over 18" in diameter and pumps used to distribute drinking water from the source to the community

Treatment Plant - a facility for cleaning and treating fresh water for drinking

Valve - a device that controls the flow of water through a pipe by opening, closing or obstructing the passageway

Water Cycle - often called the hydrologic cycle; the circulation of water from the sky to the earth and back which includes precipitation, transpiration and evaporation

Water Meter - a device used for recording the amount of water passing through a pipe

Water System - a river and all its branches; or a series of pipes, storage tanks, pumps, fire hydrants connected together to deliver water

Watershed - an area of land from which water drains to a single water body like a river

5 WATER SMART TIPS

The average water use for a family of four in the United States is 400 gallons of water per day. Here are 5 tips to help you and your family use water wisely at home.

- 1** Check your toilet for leaks at least once a year. Do this by dropping toilet dye tablets or 10 drops of food coloring into your toilet tank. Wait 10 minutes, and then check your toilet bowl. If there is color in the bowl, you have a leak.
- 2** Let your dishwasher do the work. An average dishwasher uses about 10 gallons per load. Running the average faucet for just four minutes uses the same amount of water.
- 3** Take shorter showers. Cutting just one minute from your daily shower can save 75 gallons of water each month. Imagine how much water you could save if everyone in your family does the same!
- 4** Water early in the morning (before 10 a.m.) or later in the evening (after 6 p.m.) when temperatures are cooler and evaporation is minimized.
- 5** Add a shut-off nozzle to your garden hose and save about 5-7 gallons each minute that your hose is on.

USE WATER WISELY OUTDOORS

Find the water-saving tips in this "water wheel."
Start in Ring 1 and choose every other word to uncover a one-sentence water tip (hint: read clockwise around each ring twice until you find all of the words in each tip). Then write the tip on the space below.

1

2

3

4

5

Turn off the hose while sponging a car and save water for rinsing.

Put wood chips around shrubs to help keep the soil moist.

Sweep walks and driveways instead of hosing them off.

Water plants in early morning or evening.

Water only when it's needed.

Add a shut-off nozzle to your garden hose and save about 5.7 gallons of water each minute that your hose is on.

CONSERVA-QUIZ

Water is a vital resource and conserving it is smart. Your brain is also a valuable resource. Use it to connect each question with the right answer.

Conserving water is important because it

- a) saves money.
- b) helps salmon.
- c) we won't have to build more reservoirs
- d) all of the above

How can you save water while brushing your teeth?

- a) 400 gallons
- b) True
- c) 400 gallons
- d) 400 gallons

Which of the following is the best example of water waste?

- a) washing the driveway
- b) bathing
- c) drinking
- d) fires

How much water does the average family of four use each day?

- a) 400 gallons
- b) 120 gallons
- c) 500 gallons
- d) 50 gallons

True or False: A faucet that is dripping 60 drops a minute will waste about 8 gallons a day or 240 gallons in a month.

- a) True
- b) False
- c) True
- d) all of the above

True or False: You can use your water meter to check for leaks.

- a) True
- b) False
- c) True
- d) all of the above

WATER, WATER,

HOW MUCH IS ENOUGH?

To determine how much water your sprinkler system applies to your lawn, do the “tuna can test.”

1. Set 5 empty tuna cans (or something similar) at various places on your lawn within your sprinklers’ range. Place the cans halfway between the sprinklers and the areas that generally receive the least amount of sprinkler water.
2. Turn on your sprinklers for 15 minutes.
3. Measure the depth of the water in each can and record on a piece of paper.
4. Determine the average depth.

For example: can #1 _____ + can #2 _____ + can #3 _____
+ can #4 _____ + can #5 _____ = a total depth of: _____.

Divide the total depth by 5 for an average depth of: _____.

5. Use the chart below to determine your watering times.

Find the average water depth in the tuna cans that you set out with your sprinkler.

The number to the right tells how much time it will take to get 1 inch of water to the lawn during the summer months.

ADJUST YOUR FLOW - THE “INCH” CHART	
NUMBER OF MINUTES YOU NEED TO WATER TO GET 1" OF WATER PER WEEK	
AVERAGE WATER DEPTH IN TUNA CAN AFTER 15 MINUTES	TOTAL WATERING TIME YOU’LL NEED TO GET ONE INCH OF WATER
1/8"	120
1/4"	60
1/2"	30
3/4"	20
1"	15

Cut on dotted line for tuna can test.

To measure the collected water, place this strip in each tuna can as pictured.

BE WATER SMART

The Regional Water Providers Consortium provides leadership in the planning, management, stewardship, and resiliency of drinking water in the Portland, OR metropolitan region.
